Aston Martin DB2 DHC

1952

Gallery

I was very happy to see another DB2 DHC arrive in my classic car stable. Appox. 10% of the total production of the DB2 DHC's passed through my hands during the last couple of years ! LML/50/206 is a very sound DB2 DHC with excellent chassis and absolutely corrosion free aluminium body. The body and the interior leather upholstery show some patina but they provide this Aston Martin with a certain charm, which I personally like very much. It makes this open sports car very user-friendly and as a matter of fact, this DB2 also runs very nicely. The original LB6B engine has been replaced by a correct 2,6 L LB6A Lagonda variant which provides smooth power. A silk soft gearbox, very precise steering, excellent brakes, comfortable suspension and a generally very homogeneous feeling makes this DHC the perfect summer touring Aston Martin. Recently fitted with a new, double duck hood, her easy to use weather protection, guarantees that even sudden rain will not spoil the pleasure of using this Aston Martin on a regular basis.

Brand	Aston Martin
Model	DB2 DHC
Year	1952
Steering	Right (RHD)
